

# Rodeo Souvenirs

Katie Ann and Billy Dean bought some souvenirs at the rodeo. Circle the number of souvenirs that each one bought. Then write the subtraction fact that tells how many are left.

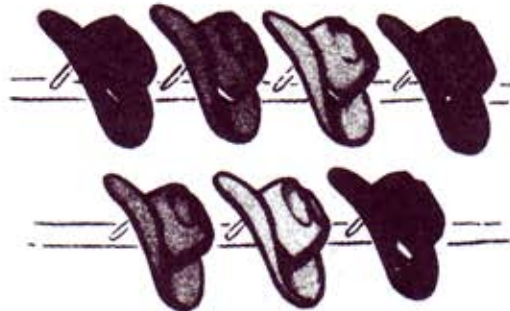

1. Katie Ann liked the different patterns in the bandanas, so she bought three. How many were left?

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

3. Katie Ann bought four hats for her cousins. How many were left on the hat rack?

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

2. Billy Dean liked the rodeo shirts, so he bought 2. How many were left at the stand?

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

4. Billy Dean bought seven rodeo lollipops, one for each day of the week. How many lollipops were left?

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$
